Why we prefer Stainless Steel for Cookware

Stainless Steel has long been the first choice of producers, designers and users of cookware because of the fact that stainless steel products do not stain, chip or rust are robust and do not affect the flavor of the food, plus their easy cleaning maintenance makes it the first choice for strict hygiene conditions such as found in hospitals, kitchens, abattoirs and other food processing plants.

Stainless steel's bright, easily maintained surface provides a modern look and attractive appearance. What's more, being fully recyclable, stainless steel has good environmental credentials.

For pots and pans optimum heat transfer is achieved using a triple bottom in stainless steel, aluminium and stainless steel. This heavy duty bottom has a "sandwich" construction with the aluminium enclosed by stainless steel.

With this professional bottom, OZTI pots and pans are perfect for use on any kind of stove whether induction, electrical, glass ceramic or gas.

Stainless steel pots are available in either a smooth satin polished finish or shiny mirror finish or may be semi-satin semi mirror as well.
